	x lect	ures			
Format of instruction	□ seminars and workshops x independent assignments x exercises □ n line in entirety □ laboratory □ partial e-learning □ work with mentor □ field work x teamwork assignment (other)				
Student responsibilities	The course work can be described as a method of continuous student progress evaluation since a model of accumulation of points has been formulated which enables the student to collect points through various activities. The goal is that every student collects sufficient number of points corresponding to a grade during the semester. In this model, a low result in one activity can be compensated by points in other activities and enabling students to decide how to allocate their efforts. Requirement for taking the test: 4 out of 7 assignments completed for the first test, and 4 out of 6 for the second test.
